In statistics, the mode in a list of numbers refers to the integers that occur most frequently. Unlike the median and mean, the mode is about the frequency of occurrence. There can be more than one mode or no mode at all; it all depends on the data set itself. For example, let's say you have the following list of numbers:

Calculating the Mean, Median, and Mode - ThoughtCo

Mean, median, and mode. Mean: The "average" number; found by adding all data points and dividing by the number of data points. Example: The mean of 4, 1, and 7 is $(4+1+7)/3=12/3=4$. Median: The middle number; found by ordering all data points and picking out the one in the middle (or if there are two middle numbers,...

Finding the Mean, Median, Mode Practice Problems

ok honestly-- I'm trying to help my nephew with his 3rd grade math and i feel really stupid because i honestly don't remember and he didn't have a book. [[yes i know i'm a retard - moving on]] It's the range mean median and mode stuff. I know the median is the middle number when you put them in order and one of them is when you add them all together then divide by the number of #'s.
